**TurnKey Internet, Inc. releases “High-Speed Stock Trader Desktop” line of virtual desktops**

LATHAM, NEW YORK (June 27, 2013) – Sustainable IT solutions provider TurnKey Internet, Inc. announced today that they are launching a new line of ready-to-go virtual desktops. These virtual desktops are outfitted with industry-leading electronic trading platforms for the purpose of providing the fastest and most simplistic financial market trading experience possible. The new “TurnKey High-Speed Stock Trader Desktop” features high-speed fiber connections and performance capabilities, making it the model framework for instant access to New York’s Wall Street.

“Over the past year, we realized that our location in regard to major trading markets is attractive to prospective clients in the Financial Markets and Stock Trading Industry,” said Executive Vice President, Tim Kirsch. “Active traders recognize that the difference of a few milliseconds can also mean the difference of tens of thousands of dollars. While we already have fiber links to both major markets with ultra-high-speed connectivity, it was simply a matter of putting together a product selection that would fit the needs of all active traders—big and small.”

TurnKey Internet’s High-Speed Stock Trader Desktop cloud-based platform gives clients the ability to manage stocks and monitor trends in financial markets at faster speeds than a traditional desktop PC. Financial information is sent straight through the cloud at ultra-fast speeds, with the highest level of security from TurnKey Internet’s SSAE-16 certified green data center. In fractions of a second, clients can make decisions that connect directly to the stock exchanges in New York, Chicago, and the rest of the world, using industry-leading analysis software and electronic trading platforms such as TradeStation, NinjaTrader, MetaTrader, and MultiCharts.

About Turnkey Internet
