

TurnKey Internet launches TurnKeySSL with OneClick technology – for virtually instant deployment of Secure Socket Layer website certificates

FOR IMMEDIATE RELEASE

Latham, NY, December 15th, 2011 – IT solutions provider TurnKey Internet today announced the launch of TurnKeySSL, the latest edition to their suite of web-based Software-as-a-Service offerings. The service is a single-point solution for enterprise-level website security and authentication, available at industry-first prices.

Secure Sockets Layer, most commonly abbreviated SSL, is a data transfer protocol widely used across the web to keep sensitive information such as financial transactions and personal data secure. Its lock and key, 256-bit architecture creates a shielded, encrypted path between server and user that is effectively impenetrable.

The service, available now at www.TurnKeySSL.com, aims to replace the traditional multi-step certificate application and renewal process, which involves creating and sending a CSR (Certificate Signing Request), receiving email communications from the SSL vendor, and performing the software installation of the SSL certificate itself. With the introduction of OneClick deployment technology, the SSL provisioning lifecycle overhead is simplified into a streamlined, easy-to-deploy solution, saving website administrators and online businesses time and costs.

“Having offered basic SSL certificates with the traditional process since our inception in 1999, the ‘TurnKey’ approach to OneClick installation of SSL certificates is a game changer,” said Adam Wills, CEO of TurnKey Internet, Inc. “Our partnership with industry leader GlobalSign lays the tracks for this industry-leading technology, allowing us to provide point-and-click, military-grade encryption services to small- and mid-sized businesses that’s on time and within budget.”

The service will add to TurnKey’s expanding product line catering to small-to-mid-sized businesses in need of best-in-class IT technologies. TurnKeySSL will be hosted from the company’s new 12,000-server-sized data center at its new headquarters in Latham, NY.
