TurnKey Internet launches cloud based hosted server reseller platform

LATHAM, NEW YORK (January 30th, 2014) – Sustainable IT solutions provider TurnKey Internet, Inc. announced that it has launched their all new cloud server reseller platform targeted at channel partners, IT service companies and cloud based service providers.

TurnKey's cloud server reseller platform allows access to a fully automated white-labeled product line of enterprise-class cloud-hosted servers featuring over 100 pre-loaded Microsoft Windows Server and Linux Server template choices hosted on the world-class platform within TurnKey Internet's SSAE 16 Type 2 and ENERGY STAR[®] certified datacenter in New York.

The new cloud server reseller platform offers channel partners the ability to establish a reseller channel and address the hosting needs of a wide range of customers across different markets without having to build and deploy their own cloud-based infrastructure. Resellers are given access to a fully automated web interface to manage their clients by allocating resources such as virtual servers, ip addresses, bandwidth, memory and disk space as well as the ability to select from multiple operating system templates.

"TurnKey has always derived a significant portion of its business from channel partners," said Adam Wills, CEO of TurnKey Internet. "We have been focused on expanding offerings that resonate within the channel partner community, and are pleased to release our new cloud reseller platform allowing complete white-label access to provision and manage cloud-based servers on our existing enterprise based TurnKey Cloud platform."

The new cloud server reseller platform lets channel partners, web designers, web resellers and IT companies offer enterprise class cloud based servers without any cost investment. Resellers can set their own prices, server plans, and bundle the cloud server offering with their own unique services to create a unified cloud-based offering to their clients.

About Turnkey Internet
