TurnKey Internet, Inc Expands Datacenter and Cloud Services to California

LATHAM, NEW YORK (October 5th, 2016) – Leading Datacenter and Cloud Hosting Solutions provider TurnKey Internet, Inc. announced today that it is expanding its Datacenter and Cloud-based infrastructure into California. The Datacenter expansion builds on TurnKey Internet’s existing New York Datacenter by offering geographically specific and redundant, high-speed Cloud services from both their East Coast and new West Coast Facility.

The West Coast Datacenter, located in Los Angeles, California, offers multiple transit backbone providers with fiber network redundancy as well as physical security features such as Biometric hand scanners, IP cameras, 24/7 monitoring and manned building security. The facility also features multiple Uninterruptible Power Supply (UPS) Units, on-site Generator Protected Power, and advanced Fire Suppression and Detection systems.

TurnKey Internet’s next generation online backup service, TurnKey Vault, will now include both East Coast and West Coast disaster recovery storage locations which offer full Cloud replication, bare metal recovery, and encrypted backup & restore.

TurnKey Internet’s high speed Cloud platform, offering Cloud based virtual private servers will also now be offered from both West Coast and East Coast Datacenters. Colocation and Datacenter services will also be offered from both geographical locations.

“Extending our Datacenter, Colocation, and Cloud-Hosted services to California matches our vision of giving customers access to a ‘turnkey’ platform that delivers unmatched value and performance,” said Adam Wills, CEO of TurnKey Internet, Inc. He continued “This geographical expansion is an exciting step in the development of our Cloud-Hosted platform. Our clients can easily deploy and manage their Cloud infrastructure across multiple geographic locations. This provides a better experience by providing redundancy and performance increases through delivery of applications closer to the end-user.”
